WRITING (30 scores)

Albert Einstein once stated "Imagination is more important than knowledge". In my opinion, the great scientist implied that anyone might understand topics of physics, chemistry or any other science using their imagination. Most importantly, imagination not only can bring about understanding but help scientists to make inventions. Certainly, providing the world with new machines, medicine or novels must require solid picturing ability.

I agree with the author's point of view. Back in the middle ages, the overwhelming majority of people were hardly intelligent. Only the wealthy ones could afford education. Despite that there still were inventors. They see progress in motion and their imagination was their only virtue.

To illustrate my opinion I give quite a popular example. Many know that Mozart barely knew tunes. The only way the musician could compose his beautiful artworks is by simply picturing them and bringing them to life. In addition, as for me, imagination helps me a lot throughout my school ages. I have passed many tests, I had not studied for out of a lack of time or laziness, completely using my improvisation.

In conclusion, I can note that your imagination can bail you out of any situation. Quick-witted people definitely have an easier living. Imagination has helped people as years passed by.
